// About Me

Passionate game programmer specializing in C++ and Unreal Engine development. Currently pursuing a degree in Creative Media and Game Technologies at Breda University of Applied Sciences. Strong foundation in gameplay systems, AI programming and engine programming. Dedicated to creating engaging and technically robust gaming experiences.

// Technical Skills

Programming

- C++
- C#

Game Engines

- Unreal Engine 5
- CRYENGINE
- Unity

Tools

- Visual Studio
- Git & Perforce

// Education

Bachelor's degree - Creative Media and Game Technologies

Breda University of Applied Sciences (BUAS)

2023 - Expected 2027 | Breda, Netherlands

Specialization in Game Programming
Strong focus on C++ and Unreal Engine development
Algorithms, data structures, and software architecture
Collaborative game development projects with multidisciplinary teams

MBO Level 4 - Game Developer

SintLucas

2019 - 2023 | Eindhoven, Netherlands

Foundation in game development and programming using C#
Practical experience with game engines and development tools
Completed multiple team-based game projects using Unity

// Projects

Group Projects

Curtain Calls

Unreal Engine 5, Blueprints & C++ | 2025-2026

Sole AI programmer; architected multiple enemy AI system
Custom AIToolkit plugin with reusable C++ Behavior Tree
Jira & Confluence & Perforce

Bloom

Unreal Engine 5, Blueprints | 2025

3C's programmer for an eerie gardening game
Dynamic occlusion system that draws occluders transparent
GitHub Actions & Perforce

Copper Clash

Unreal Engine 5, Blueprints | 2024

Created a custom vehicle controller and interior mapping
Arcade-like vehicle with a responsive physics based driving
KanbanFlow & Perforce

Solo Projects

Flow Graph Debugging Tools

CRYENGINE, C++ | 2025

Node level breakpoints and Execution trail visualization
Learning game engine architecture and seamless integration
Fully working debugging tools for the CRYENGINE FlowGraph

AI From Scratch

Visual Studio, C++ | 2025

Built a grid-based pathfinding system from scratch
Optimized using flat arrays, bucket queues, and SIMD
Working AI using A* + visibility graph and SIMD optimizations

UE Multiplayer

Unreal Engine 5, Blueprints & C++ | 2026

Created a networked replication system
RPC validation, networking fundamentals
Cross network, cross device multiplayer via domain name

// Apprenticeships & Work Experience

Apprenticeship - Front-end Developer

Prespective Digital Twin Software - Eindhoven

Aug. 2021 - Jan. 2022 • 6 months

Worked on "Prespective" software
Gained experience with Git, USS, UXML, C#, Front-end Development
Various features used in the Prespective software

Apprenticeship - Game Developer

Artking Studio - Eindhoven

Jan. 2023 - Jun. 2023 • 6 months

Worked on mobile racing game vehicle and various game features
Gained experience with Unity, C#, and Git
Designed and created multiple gameplay features
